- **Preparing the breast:** Gently massage your breast to stimulate milk flow before starting to pump. Warm compresses can further enhance milk let-down.
- **Positioning the breast shield:** Ensure the nipple is centered within the breast shield, to maximize comfort and milk extraction efficiency. The shield shouldn't pinch or cause discomfort.

- **Pain or Discomfort:** If you experience pain during pumping, immediately stop. Check the breast shield placement, reduce suction strength, or try a different pumping position. Pain is never normal and should be addressed.
- **Leakage:** Ensure all parts are correctly assembled and sealed. If you still have leakage, check for any cracks or damage to the components.
